## The Climbing-Course of Hildesheim

Turn down the mats - and go!

## The Climbing-Course of Hildesheim:

A horizontal climbing-course with multifunctional elements.

For schools, sports-clubs  
and kindergarden activities  
(indoor and outdoor)

The first climbing-course of the sports hall at the University of Hildesheim

The *climbing-course of Hildesheim* has been developed and approved by the children sports panel at Hildesheim for years. It can be fixed very well at the mostly unused front walls of the sports halls. There is no need for safety ropes because the whole complex is lower than 3m (height limitation).

The *climbing-course of Hildesheim* corresponds with the up-to-date sports concepts for children. It is of a high educational value and has an attractive technical design. Your standard mats are used as safeguards.

## THE SPECIAL CONCEPT:

The *climbing-course of Hildesheim* consists of different stations that can be used separately or in combination with station next to each other. This way a lot of children and teenagers can use the climbing-course at the same time and queues can be avoided.

Furthermore, the climbing-course can be entered from different directions.

Important climbing targets are the so called "destination-platforms" where sports equipment such as slides and ladders can be hooked so that the whole exercise areal can be enlarged.

Climbing-course in a kindergarden

The *climbing-course of Hildesheim* can be developed on customer's request. Additionally we can make your own ideas possible.

Some examples:

### Example No. 1

- diagonally positioned board with two ropes
- destination-platform with tower

### Example No. 2

- destination-platform
- whipping log
